

WHAT IS CLAIMED IS:

1. A telemetry system comprising:
  - a telemetry terminal;
  - a display unit provided in an apparatus equipped  
5 with said telemetry terminal; and
  - a control section which is provided in the  
apparatus equipped with said telemetry terminal,  
said control section being connected to said telemetry  
terminal and said display unit and displays an  
10 information on said display unit.
2. The telemetry system according to claim 1,  
wherein said telemetry terminal further comprises an  
antenna; and
  - 15 the information that said control section causes  
said display unit to display includes one of the signal  
strength at said antenna, information about the  
internal setting of said telemetry terminal, informa-  
tion about errors in the communication between said  
apparatus and said telemetry terminal, and information  
20 about errors in the communication using said antenna.
3. The telemetry system according to claim 2,  
wherein the information about internal setting of said  
telemetry terminal that said control section causes  
said display unit to display includes one of  
25 information about data transmission speed of wireless  
communication using said antenna, information about the  
test items being tested, and information about the end

2005TE000127200700

of the test.

4. The telemetry system according to claim 1,  
wherein said telemetry terminal further comprises an  
antenna and receives information transmitted from a  
5 center; and

said control section causes said display unit to  
display the information received by said telemetry  
terminal through said antenna.

5. The telemetry system according to claim 4,  
10 wherein the information received by said telemetry  
terminal from the center includes one of information  
about advertisements for merchandise and information  
about weather forecasts.

6. The telemetry system according to claim 1,  
15 wherein the information that said control section  
causes said display unit to display is information held  
by the apparatus.

7. The telemetry system according to claim 6,  
wherein the information that said control section  
20 causes to said display unit to display includes one of  
inventory information, accumulated data on sales  
performance, and information of daily consumption of  
electricity.

8. The telemetry system according to claim 5,  
25 wherein said control section causes said display unit  
to display the information in accordance with a request  
from the center.
